PROFESSIONAL SUMMARY

Computer Science undergraduate with expertise in Data Structures, Algorithms, and Full-Stack Web Development. Proficient in building and deploying scalable applications using the MERN stack, with experience in RESTful APIs, database design, and responsive UI development. Solved 150+ DSA problems across various platforms, demonstrating strong problem-solving and coding skills.

EDUCATION

Indian Institute of Information Technology Vadodara

Bachelor of Technology in Computer Science and Engineering

- **CGPA:** 8.34 / 10.0 | **Campus:** International Campus Diu

Diu, India

Aug. 2024 – May 2028

TECHNICAL SKILLS

Languages: C++, C, JavaScript (ES6+), SQL

Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS, GSAP, Framer Motion

Backend: Node.js, Express.js, RESTful APIs, JWT, Firebase Auth, Clerk Auth

Databases & ORM: MongoDB, MySQL, Prisma ORM, Supabase

Tools & Platforms: Git, GitHub, Vercel, Netlify, Postman, Razorpay

PROJECTS

NextStep Careers | *Supabase, Clerk Auth, React Router DOM, Netlify* | [GitHub](#) | [Live](#) 2026

- Built a **dual-role auth system** using **Clerk JWT** templates to issue scoped access tokens — enabling separate recruiter and candidate dashboards with role-gated routing across 6 protected pages
- Engineered a reusable **custom useFetch hook** integrating Clerk session tokens with Supabase's Authorization header per-request — enabling authenticated database queries without a backend server
- Implemented a **full job application pipeline** — resume uploads to **Supabase Storage**, application tracking with public URL references, and real-time recruiter accept/reject status updates
- Integrated **multi-parameter server-side filtering** via Supabase query builder — supporting simultaneous filters by job title, company, and Indian state with reactive re-fetching on change

ExamNotes AI | *React, Node.js, MongoDB, Gemini API, Firebase, Razorpay, JWT* | [GitHub](#) | [Live](#) 2026

- Integrated **Google OAuth via Firebase** with a custom **JWT** session layer using `httpOnly` secure cookies, protecting 5 Express route groups via middleware
- Built a **Razorpay payment gateway** with server-side order creation, **HMAC-SHA256** signature verification using Node.js `crypto`, and atomic MongoDB credit writes across 3 pricing tiers
- Engineered a **Gemini API** integration with a structured prompt-builder enforcing strict JSON output — dynamically generating Mermaid.js diagrams and Recharts-compatible chart data per request
- Implemented **server-side PDF streaming** with PDFKit — delivering AI-structured notes as a downloadable application/pdf blob directly to the React client without temporary file storage

Voyage AI — Full-Stack Travel Management Platform | [GitHub](#) | [Live](#) 2026

- Built a **full-stack AI-powered travel platform** using **React 19** and **Express.js v5** with a **MySQL/Sequelize** backend, modeling 9 relational entities and ensuring data integrity via **atomic Sequelize transactions** across 15+ REST endpoints
- Integrated **GROQ API** to generate structured, multi-day travel itineraries from user inputs, parsing AI-generated JSON and persisting it across 3 normalized tables within a single transactional workflow with automatic rollback
- Implemented secure , updating booking states, logging transactions, and triggering confirmation emails via **Nodemailer**
- Engineered a **JWT-based authentication system** with `bcryptjs` hashing and role-based access control, protecting API routes via Express middleware and frontend routes via **React Router DOM Protected Routes**
